                                                                                                                                                                                                                                                                                                                                                                                        surface. Upon ligand induced tyrosine phosphorylation in the immune response seems to be involved in regulation of B cell antigen receptor signaling. Plays a role in positive regulation through interaction with Src family tyrosine kinases and may als act as an inhibitory receptor by recruiting cytoplasmic phosphatases via their SH2 domains that block signal transduction through dephosphorylation of signaling molecules.

-i- SUBUNIT: Interacts with SYK, PIKJR1/PIKJR2, PLCG1, SHC1, INPPSD and GRB2 upon phosphorylation. May form a complex with INPPSD/SHIP, GRB2 and SHC1. Interacts with PTPN6/SHP-1 upon phosphorylation (By similarity).

-i- SUBCELLULAR LOCATION: Type I membrane protein.
                                                                                                                                          +
                                                                                                                                                                                                                                                                                                                                                                            ++

Chem. 275:17420-17427(2000).

FUNCTION: Mediates B-cell B-cell interactions. May be involved the localization of B-cells in lymphoid tissues. Binds sially glycoproteins; one of which is CD45. Preferentially binds to alpha2,6-linked sialic acid. The sialic acid recognition sit be masked by cis interactions with sialic acids on the same than the

SIMILARITY: Belongs to the immunoglobulin superfamily. SIGL (stalic acid binding Ig-like lectin) family.
SIMILARITY: Contains 6 immunoglobulin-like C2-type domains.
SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                               105

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               THE SPINAL CHORD AND HEART VALVES.

INDUCTION: IN VITRO, VEGR IS INDUCED BY BASIC FIBROBLAST GROACTOR (FGF), UNIQUELY IN THE FIRST 24 H OF CELL CULTURE.

SIMILARITY: Belongs to the Tyr family of protein kinases.

CSF-1/PDGF receptor subfamily.

SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               TYPOSINE Phosphate.

SUBCELLULAR LOCATION: Type I membrane protein.

SUBCELLULAR LOCATION: IN ALL ENDOTHELIAL TISSUES DURING ONSET OF TISSUE SPECIFICITY: IN ALL ENDOTHELIAL TISSUES DURING ONSET OF VASCULARIZATION. IN LATER DEVELOPMENT, PRESENT IN LUNG, HEART, INTESTINE AND SKIN.

DEVELOPMENTAL STAGE: EXPRESSED IN WHOLE MESODERM AT ONSET OF GASTRULATION. FROM DAY 2, CONFINED TO ENDOTHELIAL TISSUES AND EXPRESSION CONTINUES TO BE WIDESPREAD THROUGHOUT VASCULARIZATION UNTIL E9 WHERE IT BECOMES RESTRICTED TO SPECIFIC REGIONS SUCH AS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       . Biol. 169:699-712(1995).
FUNCTION: RECEPTOR FOR VEGF OR VEGF-C. HAS A KINASE ACTIVITY. THE VEGF-KINASE LIGAND/RECEP PLAYS A KEY ROLE IN VASCULAR DEVELOPMENT AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               European
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VASCULAR PERMEABILITY.

CATALYTIC ACTIVITY: ATP + a protein tyrosine =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     quail embryo.

Submitted (MAR-1997) to the EMBL/denBank/DDBJ databases.

-I- FUNCTION: RECEPTOR FOR VEGF OR VEGF-C. HAS A TYROSINE-PROTEIN KINASE ACTIVITY. THE VEGF-KINASE LIGAND/RECEPTOR SIGNALING SY.

--- PLAYS A KEY ROLE IN VASCULAR DEVELOPMENT AND REGULATION OF VASCULAR PERMEABILITY (BY SIMILARITY).

--- CATALYTIC ACTIVITY: ATP + a protein tyrosine = ADP + protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SEQUENCE FROM N.A. (ISOFORM A)
  Note=No experimental confirmation available; TISSUE SPECIFICITY: Found in the basement membrane of all contractile tissues. It is concentrated over muscle densiand M-lines which are associated with beta-integrin. DEVELOPMENTAL STAGE: Synthesized early in embryogenesis. SIMILARITY: Contains 3 LDL-receptor class A domains. SIMILARITY: Contains 16 immunoglobulin-like C2-type doma. SIMILARITY: Contains 7 laminin EGF-like domains.
                                                                                                                                                                                                                                          mitted (FEB-1998) to the EMBL/GenBank/DDBJ databases. FUNCTION: Probable role in myofilament assembly and/or attachment of the myofilament lattice to the cell membrane. May be an extracellular anchor for integrin receptors in muscle. SUBCELLULAR LOCATION: Extracellular matrix.

"A family of glycoproteins (GP55), which inhibit neurite o
are members of the Ig superfamily and are related to OBCAM
neurotrimin, LAMP and CEPU-1.";
J. Cell Sci. 109:3129-3138(1996).
--- FUNCTION: Inhibits neurite outgrowth.
--- SUBCELIVILAR LOCATION: Attached to the membrane by a GP
--- TISSUE SPECIFICITY: Restricted to the nervous system.
--- DEVELOPMENTAL STAGE: Increases during development from
levels at embryonic day 10 and is most abundant after
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1997 (Rel. 35, Created)

Preferentially binds to alpha2,8-linked sialic acid. The sialic acid recognition site may be masked by cis interaccions with sialic acids on the same cell surface. In the immune response, may act as an inhibitory receptor upon ligand induced tyrosine phosphorylation by recruiting cytoplasmic phosphareae(s) via their SH2 domain(s) that block signal transduction through dephosphorylation of signaling molecules. SUBUNIT: Interacts with PFPN6/SHP-1 and PTPN11/SHP-2 upon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             s SWISS-PROT entry is copyright. TISSUE SPECIFICITY: Expressed by macrophages in various tissues including Kupffer cells. Also found in brain microglia.
DOMAIN: Contains 1 copy of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in downmodulation of cellular responses. The phosphorylated ITIM motif binds to the SH2 domain of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    phosphorylation.

Patent number WO0121796, 29-MAR-2001;

-1- FUNCTION: LIGAND FOR THE T-CELL-SPECIFIC CELL SURFACE RECEPTOR

ICOS. ACTS AS A COSTIMULATORY SIGNAL FOR T-CELL PROLIFERATION AND

CYTOKINE SECRETION; INDUCES ALSO B-CELL, COULD PLAY AN IMPORTANT ROLE IN

MEDIATING LOCAL TISSUE RESPONSES TO INFLAMMATORY CONDITIONS, AS

WELL AS IN MODULATING THE SECONDARY IMMUNE RESPONSE BY CO-

STIMULATING MEMORY T CELL FUNCTION. DURING PREGNANCY, MAY FUNCTION

TO SKEW THE CYTOKINE OF MATERNAL T-CELLS TOWARD IMMUNOPROTECTIVE

THE PHENOTYPE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN-C3H/HeJ; TISSUE-Fetal thymus; MEDLINE-20126021; PubMed-10657606; Ling V., Wu P.W., Finnerty H.F., Bean K.M., Sp Leonard J.P., Hunter S.E., Zollner R., Thomas Jacobs K.A., Collins M.; "Identification of GL50, a novel B7-like prote binds to ICOS receptor."; J. SUBCELLULAR LOCATION: Type I membrane protein.
SIMILARITY: Belongs to the Tyr family of protein kinases.
CSF-1/PDGF receptor subfamily.
SIMILARITY: Contains 7 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       VASCULAR PERMEABILITY.

TISSUE SPECIFICITY: FOUND IN AXONS OF THE CENTRAL AND PERIPHERA NERVOUS SYSTEM AND IN DIFFERENTIATED CELL TYPES OF THE INTESTIN DISBASE: Colorectal tumors that lost their capacity to differentiate into mucus producing cells uniformly lack DCC expression. Inactivation of DCC due to allelic deletion and/or point mutations may cause both lymphatic and hematogenous metastasis of oseophageal squamous cell carcinomas.

SIMILARITY: Belongs to the immunoglobulin superfamily. DCC fami SIMILARITY: Contains 4 immunoglobulin-like C2-type domains.

SIMILARITY: Contains 6 fibronectin type III domains.

Preferentially binds to alpha2,3-ling the similarity of SPN/CD43 on T-cells. May play a role pendic acid. Binds to SPN/CD43 on T-cells.
